[NETVM](#)

The Hardware

► N/A

The Benefits:

► Scalability

► Flexibility

► Quick Rollout

Big O Tires

The Client:

Big O Tires serves the high performance, light truck, and passenger car markets with its network of more than 530 franchises and company-owned retail stores. Big O stores are strategically located in 20 Western, Midwestern, and Southeastern states plus Canada.

The Situation:

With many locations already connected to a network, Big O wanted to leverage existing architecture. Power over LAN, non-proprietary hardware, and D3Data Enterprise pricing helped the budgeting process.

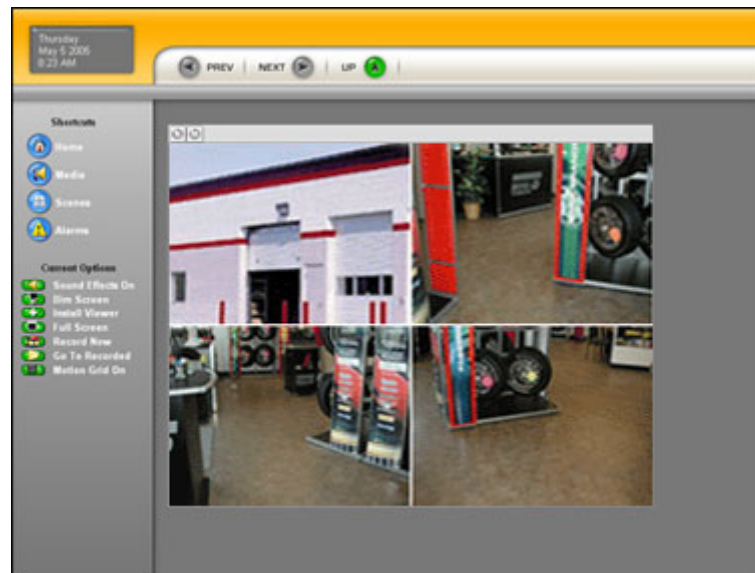

The Solution:

They are using the NETVM system to create a monitored environment for anti-theft after hours, safety reviews of their employees, and the overall well-being of each location.

The Benefits:

They liked the scalability, flexibility, and quick rollout of the system as well as the commitment of both the quality-oriented partners. They were also pleased with the tech support they received when they called in for assistance. There will be between 7 and 10 cameras at each location.

More Information:

Founded in 2001, D3Data is the first true digital video surveillance management system to offer secure, browser-based access to real-time and recorded camera video. Unlimited cameras and users in multiple local and international locations all interact with recording tools and functionality through a common web browser. On-demand encoding provides the ability to scale the recording of more than 100 cameras on a single machine.
