Scottsdale Healthcare

The Client:
Scottsdale Healthcare is committed to being the healthcare provider of choice for the greater Scottsdale area. Led by a community-based board of directors, Scottsdale Healthcare's mission is to identify and meet the healthcare needs of our community, and to meet or exceed our patients' expectations of service.

The Situation:
Three Hospitals, 20+ locations, 4,000 staff members and 1,350 active physicians, representing more than 50 specialties, is unified in its dedication to keeping the community well. Supporting Scottsdale Healthcare's staff is a corps of 1,100 volunteers who donate more than 175,000 hours of service each year. With many locations already connected to a network, Scottsdale Healthcare wanted to leverage existing architecture. Power over LAN, non-proprietary hardware, and D3Data Enterprise pricing helped the budgeting process.

The Solution:
After extensive research, Scottsdale Healthcare working with one of the D3Data integrators in Arizona. DH PACE has helped the Scottsdale Healthcare information technology group decide on the NETVM scaleable solution. Scottsdale Healthcare plans on using the system to create a monitored environment for anti-theft after hours, safety reviews, and overall well being of each location. Scottsdale Healthcare liked the scalability, flexibility, and quick rollout of the system. The commitment of the quality partners and integrators as well as the tech support they received when they called in for assistance.
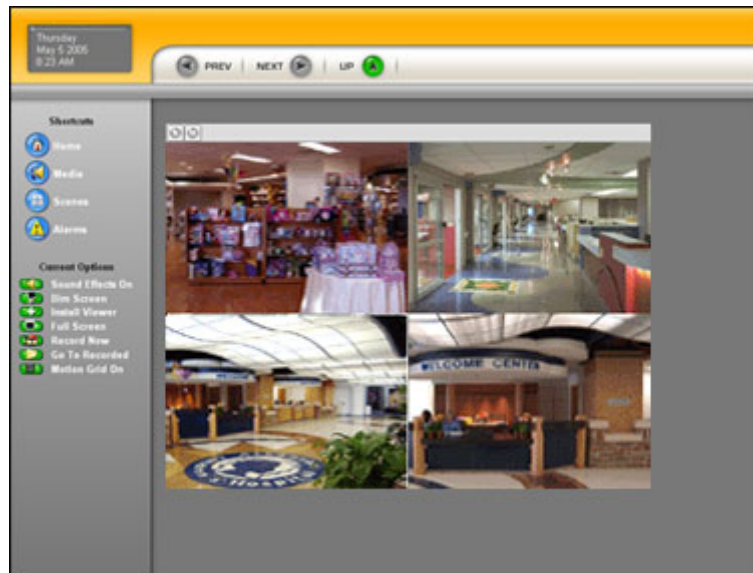

The Benefits:

▸ **Cost:**
Scottsdale Healthcare found NETVM Unlimited to be a much more affordable security video solution than updating its existing CCTV system.

▸ **Data Accessibility and Flexibility:**
Real-time monitoring and recorded digital video can be viewed from any Internet Explorer browser, anytime.

More Information:
Founded in 2001, D3Data is the first true digital video surveillance management system to offer secure, browser-based access to real-time and recorded camera video. Unlimited cameras and users in multiple local and international locations all interact with recording tools and functionality through a common web browser. On-demand encoding provides the ability to scale the recording of more than 100 cameras on a single machine.
