**OVERVIEW:**

**The Client:**
Torrey Pines High School

**The Situation:**
Needed a low maintenance, easy-to-use security monitoring system to deter vandalism.

**The Solution:**
- Software

NETVM Unlimited

**The Hardware**
- 20 Axis 2120 IP cameras

**The Benefits:**
- Accessibility
- Ease of use
- Deterrence

# Torrey Pines High School

**The Client:**
Located in San Diego County, Torrey Pines High School teaches more than 3,300 students in grades 9 to 12. The nationally funded Blue Ribbon Schools Program has honored Torrey Pines' commitment to educational excellence three times. Other organizations and media also have recognized the school's high standards and exemplary achievements in academia and sports.

**The Situation:**
Vandalism and other general security concerns prompted school officials to start thinking about better ways to monitor the 40-acre Torrey Pines campus. The school does not have its own IT department, so the solution needed to be one that regular staff could readily administer. School officials were looking for a video monitoring system that students and the wider community would support. Initial research indicated CCTV was too manpower intensive; a digital IP solution seemed a much easier option.

> *"Ongoing monitoring and maintenance is a low-tech function because the software is so easy to use."*
>
> ***- Joe Eldred***

**The Solution:**
D3Data won the competitive bid to install an IP security solution for Torrey Pines High School. The software developer created a video surveillance system with the NETVM Unlimited software solution and 15 Axis 2120 network cameras, which were installed in various outdoor locations. The security solution was readily accepted and has acted as an effective deterrent against graffiti, said Joe Eldred, assistant high-school principal. "We've seen a huge drop in the recurring cost of vandalism," Eldred said. "And we get really good support from the whole school community, from parents to community members and especially the students. It gives everyone a sense of comfort."

**The Benefits:**

- **Accessibility:**
As a browser-based IP security solution, the D3Data system allows school administrators to monitor happenings on the school campus any time of the day or night. "I can access the system from my home," said Eldred.

- **Ease of Use:**
"We've taken this out of the hands of IT, we don't consider this to be a high-tech function," Eldred said. "It's a low-tech function and our regular maintenance people have been trained to take care of it."

- **Deterrence:**
The school attributes the existence of the D3Data IP security system to a 75 percent drop in incidents of vandalism.

**More Information:**

Founded in 2001, D3Data is the first true digital video surveillance management system to offer secure, browser-based access to real-time and recorded camera video. Unlimited cameras and users in multiple local and international locations all interact with recording tools and functionality through a common web browser. On-demand encoding provides the ability to scale the recording of more than 100 cameras on a single machine.
